

Proprietary Combustion Technologies

A complete range of proprietary and proven combustion technologies is offered for the ultimate treatment and thermal valorisation of waste. Both skid-mounted units for small capacities and tailor-made large scale plants are available.

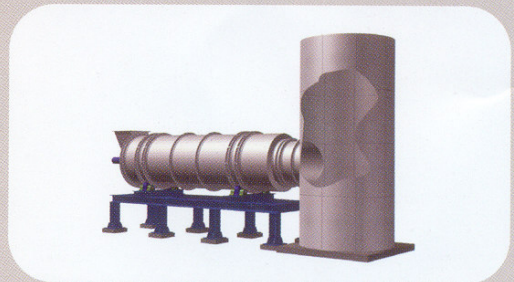

Cinclus® MultiFluid Thermal Oxidizer

Thermal oxidizers for the thermal valorisation of suspensions, slurries, liquids and polluted gas streams. In combination with the TurnOver® Rotary Furnace, the installation is capable to handle various solid residues as well.

TurnOver® Rotary Furnace

Rotary furnaces for the thermal valorisation of solid, liquid and pasty wastes.

HelioSolids® Fluidized Bed Reactor

Fluidised bed furnaces for evaporation-combustion of wet sludge or thermal valorisation of industrial sludge and slurries.
